## Modular Performance That Is Designed To Grow With Your Needs.

**RENA**

You are a professional mailer. You need the big equipment. But how much print area do you need? With the RENA XPS-2000, you answer that question when you are ready. With totally modular electronics built-in, the XPS-2000 is easy to expand. If you only need addressing capabilities, then you only buy 1.5" of print area. When your business needs grow, there is no need to buy an entirely new system. Just drop in additional modules and the XPS-2000 is up and running the next day with 3", 4.5" or 6" inches of print! Other systems may require days of down time, or expensive controller upgrades. With the XPS-2000, the future is built in to the system.

As for performance, the XPS-2000 offers some of the highest imaging speeds available. Running postcards at speeds over 33,000 per hour and No. 10s at 26,000

per hour. The dual channel vacuum transport system gives the XPS-2000 exceptional material handling ability. Running a 3" x 5" card is as easy as running padded envelopes. Alignment rails and control straps set the pieces just right for smooth and strait throughput. That translates to less hassle for the operator, and better print results every time.
